

Summer Term Home Learning Tasks

Year 3 Maths Summer 1 Week 5

MATHS
NO PROBLEM! 

This week, we will continue to work on time, with the focus on measuring time (Maths No Problem Workbook 3B Ch 9 worksheets 8-18). Please see the weekly timetable for further details.

However, please continue to practise telling the time daily, especially if your child is still not confident telling the time. Start by teaching o'clock times, followed by half past, then quarter past and quarter to. This might be enough for now! If your child seems ready, then move on to minutes past the hour and finally focus on minutes to the hour. Use an analogue clock and begin by asking the children to tell the time in words eg *half past, ten past, twenty to* before asking them to write digital times. These clock demonstration tools might be helpful

<https://www.ictgames.com/mobilePage/clock/index.html> <https://www.topmarks.co.uk/time/teaching-clock> but we would also encourage you to refer to a real analogue clock in your home too, if you have one.

Try to spend 10 minutes, three or four times a week, practising your times tables. There are lots of ways you can do this: counting while you bounce on a trampoline, walking up and down the stairs, shooting target numbers with a Nerf gun, a treasure hunt of facts around the house and of course by logging in to Times Table Rock Stars! Look out for a new battle each week!

This week, we have not set any new My Maths tasks. This will enable some of you to catch up on outstanding tasks before half term. If you have completed all tasks to date, then please reattempt any of the tasks for further practice (the questions will be different), especially any on which you scored less than 85%. To access the tasks again, go to the scores tab, click on the tasks and then click try homework again.

You can also have a go at some of the games too.
