Diet and Habitat

The
Spikeodofersaores
and his lucky
colour

The Spikeodofersauros

Diet: Meat [like us] And normally sea plants and other under water animals.

Habitat

They would hibernate when the water is cold they would go in there coral and snuggle up to their warm coral pieces or go next to other Spikeodofersauros that they married.

They would explore their own habitat but they can't go further than: 100 Feet.

THE SPIKEODOFERSAORES AND HIS LUCKY COLOUR

His lucky colour is yellow if you show him or her a yellow things he or she will be tamed for 82 years [they only live for 81 years] or they could do flips and tricks to show off. They most likely wouldn't pay attention on looking at the card or something yellow. If you show them a red card they would run away they would think its blood or something gross.[most likely something real gross I can't tell you]
