

The Amazing Manatees

Introduction

This booklet will tell you about Manatees. But firstly you need to know all about them first. This is just a little fact, manatees are herbivores. Read on to find out more!

What a Manatee eats

Manatees are primarily herbivores, they can eat up to 25 pounds a day. Manatees feed off the bottom, in the water column, and at the surface. They can eat seaweed, acorns and leaves off of mangrove trees.

Where a Manatee lives

An Amazonian Manatee only lives in the River Amazon and a normal Manatee can live in coasts of warm and shallow waters.
